Gamco Improves Operations with New Equipment

- New CNC Machining Center Offers Faster Lead Times and Enhanced Quality -

FLUSHING, NY, July 15, 2016 – Fenestration systems and architectural metals fabricator Gamco Corporation recently invested in and installed a new state-of-the-art CNC Machining Center to enhance much of its aluminum machining operations. The new equipment utilizes CAD drawings directly from Gamco's design and engineering team to machine linear aluminum components used in its storefront and curtain wall framing systems, entrance doors, canopy systems and other custom metal and fenestration products.

Left: Gamco Corporation's newly acquired CNC Machining Center significantly speeds fabrication of linear aluminum components. Right: Drilling, notching and routing along 3 axes are enabled directly through computer-controlled programming, speeding production, minimizing waste and enhancing quality.

"Gamco's new CNC machining equipment has transformed our custom fabrication operations, expanded our capabilities and improved efficiency," said Davidson Chen, Gamco's Sales Manager. "It allows Gamco to provide a consistently higher degree of quality with faster lead times across many of our product lines."

The CNC 6500 Machining Center operates rapidly on three axes to drill, notch, rout and machine non-round tubular or flat stock aluminum up to 12" wide and in lengths as long as required. Once programmed with a design, the computer controlled equipment can machine components accurately and identically over and over again, eliminating operator error, waste, and variable quality. The CNC 6500 Machining Center is manufactured by JIH-I Machinery Company of Taiwan, whose equipment lines have been sold internationally for nearly a half century.

Gamco Improves Operations with New Equipment

- continued -

"The new CNC 6500 allows us to greatly reduce our lead times overall by automating what previously took multiple steps to fabricate," added Davidson Chen. "For example, we supply curtain wall for large new construction projects, and we can produce the framing systems in a fraction of the time now."

Operator safety is also improved, as the operator does not have to handle the aluminum stock once the machining process is initiated. Employees can train on the equipment and be very skilled and efficient in a short amount of time, compared with years of training and experience for a traditional machine operator.

###

Gamco Corporation manufactures a wide variety of custom quality fenestration systems and architectural metal appointments for commercial, institutional and residential properties. Founded in 1986, the company has established a reputation for excellence in quality, customer service, design and manufacturing. Based in New York City, the company serves architects, construction professionals and property owners throughout the metropolitan area, Northeast and Mid-Atlantic states. Gamco is a NY State certified Minority Business Enterprise (MBE). For more information, contact Gamco at 718-359-8833 or visit www.gamcocorp.com.
